

BDA EXPT Neo4J

Neo4J

Queries:

1. Create multiple people (nodes):

```
CREATE
(alice:Person {name: "Alice", age: 30}),
(bob:Person {name: "Bob", age: 32}),
(charlie:Person {name: "Charlie", age: 25}),
(dave:Person {name: "Dave", age: 28}),
(eve:Person {name: "Eve", age: 35});
```

2. Create relationships between the people:

```
MATCH (a:Person {name: "Alice"}), (b:Person {name: "Bob"})
CREATE (a)-[:FRIEND]->(b);
```

```
MATCH (b:Person {name: "Bob"}), (c:Person {name: "Charlie"})
CREATE (b)-[:FRIEND]->(c);
```

```
MATCH (c:Person {name: "Charlie"}), (d:Person {name: "Dave"})
CREATE (c)-[:FRIEND]->(d);
```

```
MATCH (d:Person {name: "Dave"}), (e:Person {name: "Eve"})
CREATE (d)-[:FRIEND]->(e);
```

```
MATCH (a:Person {name: "Alice"}), (e:Person {name: "Eve"})
CREATE (a)-[:COLLEAGUE]->(e);
```

3. Combine nodes and relationships creation:

```
CREATE
(alice:Person {name: "Alice", age: 30})-[:FRIEND]->(bob:Person {name: "Bob", age: 32}),
(bob)-[:FRIEND]->(charlie:Person {name: "Charlie", age: 25}),
(charlie)-[:FRIEND]->(dave:Person {name: "Dave", age: 28}),
(dave)-[:FRIEND]->(eve:Person {name: "Eve", age: 35}),
(alice)-[:COLLEAGUE]->(eve);
```

Output:
