

Experiment No 10

Aim: Write a program to perform Twitter data/Healthcare data analysis using R language.

Objective:

- Understand syntax and environment of Rstudio.
- Use Twitter data/Social data for analysis purpose.
- Perform analysis and plot graphs based on given data

Input and Output:

Any social media dataset will be input

Result: Implementation of the solution for above problem and attach input, program, intermediate and output files.

Code:

```
install.packages("dplyr")
install.packages("ggplot2")
install.packages("lubridate")
install.packages("tidyr")

library(dplyr)
library(ggplot2)
library(lubridate)
library(tidyr)

football_data <- read.csv("C:\\Users\\melbin\\Desktop\\goalscorers.csv")

str(football_data)
summary(football_data)

str(football_data)
head(football_data)

library(dplyr)

top_scorers <- football_data %>%
  group_by(scorer) %>%
  summarise(goals = n()) %>%
  arrange(desc(goals)) %>%
  top_n(10, goals) # Get the top 10 goal scorers

print(top_scorers)

goals_by_team <- football_data %>%
  group_by(team) %>%
  summarise(total_goals = n()) %>%
  arrange(desc(total_goals))

print(goals_by_team)

penalty_goals_by_team <- football_data %>%
  filter(penalty == TRUE) %>%
```

```
group_by(team) %>%  
summarise(penalty_goals = n()) %>%  
arrange(desc(penalty_goals))
```

```
print(penalty_goals_by_team)
```

```
library(ggplot2)
```

```
ggplot(goals_by_team, aes(x = reorder(team, -total_goals), y = total_goals)) +  
  geom_bar(stat = "identity", fill = "steelblue") +  
  labs(title = "Total Goals by Team", x = "Team", y = "Total Goals") +  
  theme(axis.text.x = element_text(angle = 45, hjust = 1))
```

```
ggplot(goals_by_team, aes(x = reorder(team, -total_goals), y = total_goals)) +  
  geom_bar(stat = "identity", fill = "steelblue") + # Bar plot  
  labs(title = "Total Goals by Team", x = "Team", y = "Total Goals") +  
  theme(axis.text.x = element_text(angle = 45, hjust = 1)) # Rotating the x-axis labels
```

```
goals_by_scorer <- football_data %>%  
  group_by(scorer) %>%  
  summarise(total_goals = n())
```

```
# Create a bar plot
```

```
ggplot(goals_by_scorer, aes(x = reorder(scorer, -total_goals), y = total_goals)) +  
  geom_bar(stat = "identity", fill = "forestgreen") +  
  labs(title = "Total Goals Scored by Player", x = "Player", y = "Total Goals") +  
  theme(axis.text.x = element_text(angle = 45, hjust = 1))
```
